Highlights

- In week 19 of 2016, the individual local flu activity indicator trends were mixed. As a whole, flu intensity decreased compared to last week and was low. Next week’s summary will be the last for the 2015-16 flu season.
- Geographic spread and local intensity designation (Click here for definitions) = LOCALIZED, LOW
- Local medical facility labs reported 839 tests run with 58 (6.9%) positive results for week 19 of 2016. This is lower than last week’s 8.7% and is higher than the weekly baseline.
- The percentage of ED visits for influenza-like-illness (ILI) increased slightly while respiratory symptom visits were stable compared to week 18. The percentage of ED visits for ILI and respiratory symptoms are both higher than their respective baseline averages for the week.
- In week 19 of 2016, the majority of trends for categories of local over-the-counter medication sales tracked decreased (decrease in cough and cold, electrolyte, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; increase in thermometer sales) compared to last week.
- In week 19, influenza activity decreased in the U.S. Please visit the CDC website for specific information (National data is usually updated on Friday of each week).

1Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.
2Number of weeks “▲” = Increase (>2%), “▼” = Decrease (>2%), “●” = Stable (-2% to +2%).
3Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).
4Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Franklin County, OH athenaHealth® network primary care practices/physicians. Claims data are subject to filing and processing time lags. Historical data are updated when they are received.
5Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.
6Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.
CDC 122-Cities Mortality Reporting System: Pneumonia and Influenza (P&I) Mortality
In week 19 of 2016, 6.7% of all locally registered deaths were attributed to pneumonia and influenza. Nationally in week 19, 6.7% of deaths reported were attributed to pneumonia and influenza. This national percentage was at the national epidemic threshold for week 19.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports
In week 19, the preliminary local influenza and influenza-like-illness (ILI) visit rate to athenaHealth® providers (0.8 per 1,000 visits) decreased compared to the previous week and is below its baseline average for the week (Figure 1). The week 19 percentage of all Emergency Department (ED) visits categorized as ILI increased slightly compared to the previous week (Figure 3) and is higher than its historic baseline for the week.

Nationally, during week 19 of 2016, 1.4% of patient visits reported through ILINet were due to influenza-like illness (ILI). The percentage is below the national baseline of 2.1% for week 19.

Laboratory Surveillance
During week 19 of 2016, reporting Franklin County sentinel medical facility laboratories tested 839 specimens, with 58 (6.9%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2014 through week 19 of 2016 is 39,297 with 3,419 (8.7%) positives (2,705 type A, 708 type B, 6 both A and B, 0 type unknown).

Nationally in week 19 of 2016, clinical laboratories reported 10,510 specimens tested for influenza viruses, 741 (7.1%) of which were positive (205 type A, 536 type B). Public health laboratories reported testing 396 specimens, 89 of which were positive (38 type A – of which 20 were A(H1N1)pdm09, 11 were A/H3, and 7 were not subtyped; 51 type B – of which 17 were Yamagata lineage, 19 were Victoria lineage, and 15 where lineage was not performed). Please visit the CDC website for more information, including cumulative data since week 40.

In week 19 of 2016, participating Ohio clinical labs reported 35,680 specimens tested for influenza this season thus far. Positive results include: (513) A(H1N1)pdm09; (21) A/H3N2; (1,898) Flu A Not Subtyped, and (791) Flu B (through 5/14/16). ODH Public Health Lab reported 589 specimens tested for influenza from various submitters this season thus far. Positive results include: (317) A(H1N1)pdm09; (21) A/H3N2; (70) Influenza B (through 5/14/16). Please visit the ODH website for more information.

ED Respiratory Visits
In the 19th week of 2016, the percentage of all ED visits categorized as respiratory was stable compared to the percentage seen the previous week and is higher than its historic baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales
In week 19 of 2016, the majority of trends for categories of local over-the-counter medication sales tracked decreased (decrease in cough and cold, electrolyte, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; increase in thermometer sales) compared to last week.
