## Highlights

- In week 41, local flu activity indicator trends were mixed and overall activity was low.
- Geographic activity and local intensity designation (Click here for definitions) = SPORADIC, LOW
- Local medical facility labs reported 697 tests run with 4 (0.6%) positive results for week 41 of 2015. This is slightly lower than last week’s 0.7% and is slightly higher than the weekly baseline.
- The percentage of ED visits for influenza-like-illness (ILI) was stable, while respiratory symptoms visits increased slightly compared to week 40. The percentage of ED visits for ILI is slightly above the baseline average while respiratory symptom visits are similar to its weekly baseline average.
- In week 41 of 2015, trends for the local over-the-counter medication sales tracked increased (increase in cough and cold, electrolyte, thermometer, chest rub, pediatric anti-fever, adult anti-fever and throat lozenge sales) compared to last week.
- Nationally in week 41, influenza activity was low. Please visit the CDC website for specific information (National data is usually updated on Friday of each week).

**Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.**

**Number of weeks “▲” = increase (>2%), “▼” = decrease (>2%), “□” = stable (-2% to +2%).**

**Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).**

**Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of ILI visits to Franklin County, OH athenaHealth® network primary care practices/physicians.**

**Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.**

**Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.**
CDC 122-Cities Mortality Reporting System: Pneumonia and Influenza (P&I) Mortality
In week 41 of 2015, 6.3% of all Columbus and Franklin County deaths were attributed to pneumonia and influenza. Nationally, 5.7% of deaths reported were attributed to pneumonia and influenza in week 41. This national percentage is below the national epidemic threshold of 6.0% for week 41.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports
In week 41, the preliminary local influenza-like-Illness (ILI) visit rate to athenaHealth® providers (0.8 per 1,000 visits) increased slightly compared to the previous week and is slightly lower than the baseline average for the week (Figure 1). The week 41 percentage of Emergency Department (ED) visits for ILI symptoms was stable compared to the previous week (Figure 3) and is slightly higher than the historic baseline for the week.

Nationally, during week 41 of 2015, 1.4% of patient visits reported through the US Outpatient Influenza-like Illness Surveillance Network (ILINet), were due to influenza-like illness (ILI). The percentage is below the national baseline of 2.1%.

Laboratory Surveillance
During week 41 of 2015, reporting Franklin County sentinel medical facility laboratories tested 697 specimens, with 4 (0.6%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2014 through week 41 of 2015 is 3,798 with 31 (0.8%) positives (20 type A, 11 type B, 0 both A and B, 0 type unknown).

Nationally in week 41 of 2015, clinical laboratories reported 7,998 specimens tested for influenza viruses, 138 (1.7%) of which were positive (101 type A, 37 type B). Public health laboratories reported testing 444 specimens, 19 of which were positive (18 type A – of which 1 was A(H1N1)pdm09, 14 were A/H3N2, and 3 were not subtyped; 1 type B – Victoria lineage). Please visit the CDC website for more information.

Participating Ohio clinical labs reported 756 specimens tested for influenza virus this season, 2 (0.3%) of which were positive (1 A(H1N1)pdm09; 1 A/H3N2; 0 Flu A Not Subtyped, and 0 Flu B (through 10/17/15). ODH Public Health Lab results for Ohio cases that are PCR positive for influenza during the 2015-16 season included: (1) A(H1N1)pdm09; (0) A/H3N2; (0) Influenza B (through 10/17/15).

ED Respiratory Visits
In the 41st week of 2015, the percentage of all ED visits categorized as respiratory was slightly higher compared to the percentage seen the previous week and is slightly higher than its historic baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales
In week 41 of 2015, trends for the local over-the-counter medication sales tracked increased (increase in cough and cold, electrolyte, thermometer, chest rub, pediatric anti-fever, adult anti-fever and throat lozenge sales) compared to last week.
