**Highlights**

- In week 52, the individual local flu activity indicator trends either decreased or remained stable. Overall, local flu intensity was similar to the previous week and continues to be low.
- Geographic spread and local intensity designation (Click [here](#) for definitions) = SPORADIC, LOW
- Local medical facility labs reported 1,034 tests run with 7 (0.7%) positive results for week 52 of 2015. This is lower than last week’s 0.87% and is lower than the current week's baseline.
- The percentage of ED visits for influenza-like-illness (ILI), as well as respiratory symptoms, were both stable compared to week 51. The percentage of ED visits for ILI is slightly above its baseline average for the week, while respiratory symptom visits are similar to its baseline average for the week.
- In week 52 of 2015, the majority of trends for all local over-the-counter medication sales tracked decreased (decrease in cough and cold, thermometer, chest-rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; increase in electrolyte sales) compared to last week.
- Nationally in week 52, influenza activity increased slightly in the United States. Please [visit the CDC website](#) for specific information (National data is usually updated on Friday of each week).

1) Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.
2) Number of weeks: "▲" = increase (>2%), "▼" = decrease (>2%), "☆" = stable (-2% to +2%).
3) Black line is current year data. Based on data availability, red line is historical average (excluding pandemic year).
4) Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Franklin County, OH athenaHealth® network primary care practices/physicians.
5) Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.
6) Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.
CDC 122-Cities Mortality Reporting System: Pneumonia and Influenza (P&I) Mortality
In week 52 of 2015, 5.2% of all Columbus and Franklin County deaths were attributed to pneumonia and influenza. Nationally in week 52, 5.7% of deaths reported were attributed to pneumonia and influenza. This national percentage was below the national epidemic threshold of 7.0% for week 52.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports
In week 52, the preliminary local influenza and influenza-like-illness (ILI) visit rate to athenaHealth® providers (2.8 per 1,000 visits) decreased slightly compared to the previous week and is below its baseline average for the week (Figure 1). The week 52 percentage of Emergency Department (ED) visits for ILI were stable compared to the previous week (Figure 3) and is slightly higher than the historic baseline for the week.

Nationally, during week 52 of 2015, 2.8% of patient visits reported through ILINet were due to influenza-like illness (ILI). The percentage is above the national baseline of 2.1% for week 52.

Laboratory Surveillance
During week 52 of 2015, reporting Franklin County sentinel medical facility laboratories tested 1,034 specimens, with 7 (0.7%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2014 through week 52 of 2015 is 13,643 with 106 (0.8%) positives (73 type A, 29 type B, 4 both A and B, 0 type unknown).

Nationally in week 52 of 2015, clinical laboratories reported 13,373 specimens tested for influenza viruses, 247 (1.8%) of which were positive (157 type A, 90 type B). Public health laboratories reported testing 759 specimens, 91 of which were positive (74 type A – of which 47 were A(H1N1)pdm09, 19 were A/H3, and 8 were not subtyped; 17 type B – of which 4 were Yamagata lineage, 1 were Victoria lineage, and 12 where lineage was not performed). Please visit the CDC website for more information, including cumulative data since week 40.

In week 52, participating Ohio clinical labs reported 8,934 specimens tested for influenza this season thus far. Positive results include: (1) A(H1N1)pdm09; (2) A/H3N2; (15) Flu A Not Subtyped, and (10) Flu B (through 1/2/16). ODH Public Health Lab reported 86 specimens tested for influenza from various submitters this season thus far. Positive results include: (4) A(H1N1)pdm09; (1) A/H3N2; (1) Influenza B (through 1/2/16). Please visit the ODH website for more information.

ED Respiratory Visits
In the 52nd week of 2015, the percentage of all ED visits categorized as respiratory was stable compared to the percentage seen the previous week and is similar to its historic baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales
In week 52 of 2015, trends for the majority of local over-the-counter medication sales being tracked decreased (decrease in cough and cold, thermometer, chest-rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales; increase in electrolyte sales) compared to last week.
